

Aastra Announces Software Release 1.4.1 for our SIP IP Phones

www.aastratelecom.com

Aastra Telecom is pleased to announce the availability of a new software update for our Enterprise IP portfolio of SIP telephones, including Models 480i, 9133i, 9112i, and 480i CT.

Release 1.4.1 delivers new features and enhancements including:

- » Local redundancy support enabling administrator to configure backup proxy and registrar servers locally on the phone.
- » Simplifying deployments complexity through the auto-discovery of a configuration server.
- » Dial plan enhancement allows the administrator to configure the phone to automatically append prefix digits thereby simplifying users dialing pattern.
- » XML enhancements including new XML objects and events-triggered XML application access.
- » Enhanced integration with Sylantr[®] platforms via support of additional classes for priority alerting. In addition, Last Call Return is supported on either programmable hard keys or softkeys.
- » New interoperabilities with partners' solution including MetaSwitch platform and CounterPath softclient.

Details on these and other new features can be found in the Release Notes. Please visit www.aastratelecom.com/IPPhones to download the new firmware and Release Notes.

To help our customers better understand and leverage the new features in this release, Aastra Telecom will be hosting free webinar information sessions. For more information and to register for one of the webinar sessions, please visit www.aastratelecom.com/support/webinar.asp.
